

August 9, 2013

Mr. Juan E. Mendez  
The UN Special Rapporteur on Torture  
and Other Cruel, Inhuman and Degrading  
Treatment or Punishment

Dear Sir,

We have the honor to express our highest appreciation for the responsibilities of the UN Special Rapporteur on Torture and Other Cruel, Inhuman and Degrading Treatment or Punishment. We have been engaged in throwing light on covert and overt harassment for fifteen years in Japan. When we established our private group, we initially had fourteen members, who were victims. In the meantime, this number has grown to more than 320, with more than 1,200 persons being recognized as victims in our country. In November 2007 our group became a Specified Nonprofit Organization.

As a result of our fifteen year survey, we have been able to provide evidence that covert and overt harassment should be declared true modern-day torture. These types of torture used many new technologies. For example, 24-hour tracking, mental and physical attack and manipulation, transmission of voice and images to the brain, triggering of diseases, etc. These attacks and manipulations continue day in, day out, by invisible means within normal social life. We have 17 recognized dead victims, half of them suicides. Many victims are faced with disaster and fatal consequences. Most of the victims are unable to hold a job because they are incapacitated by the loud voices acting on their brains, sleep disturbance, physical pain, etc.

Attached is a copy of the petition we submitted to President Obama in which we explained the facts of both types of harassment. The petition was submitted on May 12, 2009. The number of victims has risen from 500 to 1,200 in the course of four years. While we know that most people in Japan have been affected by this problem in one way or another, we are aware that it is not limited to Japan, but is an issue for people all over the world.

Sincerely yours,

TERUKATSU ISHIBASHI

Chairman of the Board of Directors  
Technological Crime Victims Network  
Specified Nonprofit Organization  
Tozaikanbil-honkan, room21, 2-9-6 Iidabashi, Chiyoda-ku,  
Tokyo 102-0072, Japan (Phone & fax: 03-5212-4611)

## **Covert Harassment and Overt Harassment in Japan**

I am the chairman of the Board of Directors Technological Crime Victims Network Specified Nonprofit Organization, Terukatsu Ishibashi.

Today, I came here to inform you, Mr. Juan E. Mendez, about the current situation of the victims of covert harassment and overt harassment in Japan.

Firstly, I would like to thank from the bottom of my heart, Ms. Rhonda Pence, and Mr. Derrick Robinson of FFCCHS, the organizers of this meeting, who gave us this opportunity for the first time.

It has been 15 years since this NPO's private organization was established. During the 15 years, we held not only 137 regular meetings in Tokyo, where the main office is located, but we also held meetings all over Japan, such as in Sapporo, Aomori, Sendai, Nagoya, Osaka, Fukuoka and Okinawa, trying to understand the real situation of the damage.

In addition, the 17-page detailed survey we ask our members to respond when they join us has contributed to grasp the real situation of the damage. We have collected the responses from more than 1000 victims and finished totaling answers from 815 people. What I am going to talk about today is based on the total results. As a result of these activities, we have become capable of understanding the real situation of covert and overt harassments to a great extent. I am certain that what I am going to tell you about the situation in Japan will be some reference to you, too.

So, I would like to start with the reason I started organizing this kind of meeting before I start explaining about both harassments which also serves as an introduction of myself.

I realized that I was a victim of covert harassment when I experienced concentrated attacks that used invisible tactics starting May 17, 1995. The attack continued until the spring in the following year. Before the series of attacks, I had been receiving overt harassment since 1991 as a preliminary step. As the harassment escalated, my tap water became abnormal on May 17, 1995. My anger flared up when I thought about those who were harassing me with water, which was important to human beings. Back then, I could not even imagine that an invisible technology could make people sense an abnormality in the tap water, so I was seriously concerned about contamination of the water. When image transmittance was added, I was totally played by them. In other words, I seriously believed that I could not drink the tap water at home. I drove around looking for water with 20-liter plastic containers in the car. Soon, image transmission directly to my brain started. The images were divided in two sides, one was attacking and the other was protecting. One of them was an image that when I start putting

## **Covert Harassment and Overt Harassment in Japan**

water in the container from the faucet in the public park, somebody sends electric waves to make the water abnormal. The other one was that they have many people making coils to make an electric wave transmitter to interfere the harmful electric waves with counter electric waves. The image of the press conference to announce the completion of the transmitter was sent, too. However, when they are about to use it, it failed and the image was changed to the one in which they started all over again to make the transmitter. I never thought that those images were fictions so that I seriously believed them and was played by them. As the water abnormality related images were escalated and changed, I thought those were true and kept moving all over Japan for a half year. Though, it finally became certain for me that covert harassment is true through these concentrated attacks. I thought that the only way to protect myself is to write a book about my experience and published my book, “Impeaching the Misuses of the Electric Waves as a Weapon!” I began selling the book on July 13, 1997, putting advertisement on Mainichi Newspaper. Since the book was published privately, I could not use established distribution channels, so I kept putting advertisements on newspapers once a month for about a half-year and asked book stores to sell my book one by one. I managed to sell 800 books in that year.

Through my book, I made connection with 24 people who claimed to be the victims of similar harassments. We agreed that this issue could not be solved by an individual; therefore, I addressed the launch of club and started the “Electric Wave Abuse Victims’ Society”, the origin of the NPO based on the approval of 14 people. The name was changed twice later and we decided to use the current name at the time we changed the club to a NPO in 2007 and lead to the present. Currently, we have more than 360 members. It is important that I, myself, am a victim and I became confident about the covert harassment due to the concentrated attacks. Without the confidence, I think I could not have founded the society and managed to maintain it. Not to mention there was no way that I could openly appeal to outsiders. Consequently, there is no doubt that firm belief about the harassment is very important in this problem.

Now, I would like to start explaining the outline of harassments. The base used to put everything together is the table I published in my book, “Impeaching the Misuses of the Electric Waves as a Weapon!” I was able to make such a table from my own experience only. We have been using this table as the base of improvement since we launched the society.

### **Table 1. Electric Wave Abuses Based on Experience**

## Covert Harassment and Overt Harassment in Japan

### I. Abuses on People

1. Intervention to the brain ① peek into one's mind, ② transmit images and intentions, ③ image insertion, ④ turn a person into a maniac, ⑤ intervention to one's thoughts, ⑥ brain sharing (importance of lie detector completion and peaking during sleep, ⑦ suppression and activation of thoughts, ⑧ suppression and alteration of decision, ⑨ dream manipulation and ⑩ oblivion and recollection (manipulation of memory)

2. Manipulation of Instinct ① appetite manipulation, ② sexual desire manipulation and ③ manipulation of desire to sleep

3. Manipulation of Emotion ① manic-depressive manipulation, ② amplification and relief of hatred ③ make one nervous ④ love manipulation and ⑤ impulse manipulation

4. Manipulation of Physical Functions ① excretion manipulation, ② body odor, ③ gas generation, ④ fatigue manipulation, ⑤ sleep paralysis, ⑥ motor function manipulation, ⑦ illness, ⑧ allergization, ⑨ motion sickness, ⑩ itch and numbness manipulation ⑪ make one's habit worse ⑫ handwriting manipulation ⑬ loosening one's lacrimal gland

### II. Abuses on Equipment

1. Signal Control, 2. Phone Control, 3. Word Processor Control, 4. Copier Control, 5. TV and Radio Control, 6. Control of the Vehicle Engine Condition

### III. Abuses on Natural Environment

1. Weather Control, 2. Water Disturbance, 3. Plant Growth Disturbance, 4. Wind Development (Tornado Development) 5. Wave Development 6. Earthquake and Volcanic Eruption

## Overt Harassment

I am going to explain the real situation of harassments based on the result total of questionnaire survey collected from 815 members. I start with overt harassment. The questionnaire survey conducted by the NPO describes 35 overt harassments and asks you to circle ones you are experiencing or experienced. The 35 items are the following:

## Covert Harassment and Overt Harassment in Japan

Tapping and secret photographing, following (shadowing and stalking) and watch-keeping by people, following and watch-keeping using a car, following and watch-keeping with motorcycle, silent phone calls, threatening phone call, phone disturbance, house breaking, trespassing, loss of money and goods in the house, location change of money and goods in the house, throwing objects into the site, throwing objects into the house, house burglary, site ravaging, dumping dead animals in or around the premise, dumping feces in or around the premise, rape, assault, threatening, cussing, suspicious behavior, hostile attitude (i.e. glaring and spitting), suspicious behavior of the neighbors, suspicious behavior of the people at work, suspicious behavior of the police, gossips, bill distribution, ostracism (isolation), intervention to your PC, suspicious emails, failure of electrical devices, malfunction of electrical devices, malfunction of fluorescent lights, malicious mischief on your vehicle, bike or motorcycle, uncontrollable vehicle, an attack with alien substance when you are driving, malfunction of a car door, undelivered mail, suspicious treatment when you are shopping, suspicious behavior, attitude and the content of the program from TV caster or radio personality that gives you an impression of a personal attack

**Table 2 shows the total results. However, there are too many items, so we divide them into 12 categories to explain for easier understanding.**

- Following (Stalking)
- Hostility
- Suspicious Behavior of the Neighbors
- Phone Related Harassment
- Failure or Malfunction of Electric Devices
- Trespassing
- Harassment on Vehicles (Car, Bike and Motorcycle)
- Undelivered mails
- Suspicious (dubious) Treatment Experienced During Shopping
- Suspicious Behavior, Attitude and the Content of the Program from TV Caster or Radio Personality
- Implications at Work, etc.
- Tapping and Secret Photographing

I would like to explain each of them.

## **Covert Harassment and Overt Harassment in Japan**

### **1. Following**

First is following (stalking) harassment. It is a persistent kind of following, which starts as soon as you leave your house and they keep following you one after another.

Normally, the victim encounters the next “hostility” at his/her destinations after “following”, and it makes the victim believe that the offender knows where he/she goes next. After all, the victim has no choice but believes his/her entire life is being watched.

### **2. Hostility**

Hostility is executed with following. The victim experiences incidents of glaring, spitting, cussing (abuse) in passing, blocking of the path etc. more frequently. It happens even when you are out in your vehicle and it seems accurate to use an expression, “gang up” due to the number of people following you. Therefore, traffic jams occur all the time, and the offender makes it worse by controlling signals. Such sudden hostile attacks give significant psychological damage to the victim. It is not strange if a person who had peaceful life until yesterday becomes a target of hostile attacks and starts panicking. The hostile attack is so intense that it makes us wonder that the goal of the offender is to send the victim to a mental hospital.

### **3. Suspicious Behavior of the Neighbors**

As a result of the questionnaire survey, many victims suspect their neighbors to be the main body of the crime. Abnormal incidents, such as unusual noise comes from the next door, too many visitors to the next door, sudden change of attitude, the neighbor watch you leave home and close their door loudly as you pass by, the trash he/she placed at the collection place is brought back to the house, your garden tree is cut, dumping trash, feces and dead animals in your premise, every house in the neighborhood repeatedly hangs yellow laundry items outside to dry. There is nobody who can remain peaceful if these incidents are repeated persistently.

### **4. Phone Related Harassment**

Phone related harassment starts, along with the others. Those are silent phone calls, 1-ring calls, nuisance phone calls, abnormal noise from

## **Covert Harassment and Overt Harassment in Japan**

the phone, phone rings when you try to do something, disconnection during a conversation, the phone rings in one-hour intervals while asleep, outgoing call history that you did not make, malfunction, hear a voice that blames you during the subtle pause that the person you are speaking makes, etc. almost all victims believe their phones are tapped. Regarding phone related harassment, it seems possible to get help from the police or phone companies (NTT, KDDI etc.) to identify the offender if you record the date and time and phone number of each incident. However, I have not received any report of being able to get help from such organizations.

### **5. Failure or Malfunction of Electric Device**

The victims also encounter a failure or malfunction of electric devices. In order to fix or buy a new one, they are forced to waste their time and money. Especially, PC malfunctions or failures are increasing nowadays, and some victims have stopped using PCs. It makes us imagine the existence of a specialized department that can control a victim's PC from distance. When your electronic device fails, you call the customer support center, but they respond to you in a way that make you suspicious if they have been waiting for you to call. Therefore, we think that there may be a special group to harass people that commits in both causing PC failure and pretend to be customer service window. It thoroughly trains the staff to cause malfunctions and to respond to the victim's request for a consultation, cause failure or malfunction from a distance and drive the victim into a corner by responding senselessly to the victim's request for consultation. Some victims have been trying to keep and record the evidence, but we have cases in which the recording device broke down or the recording was deleted.

### **6. Trespassing**

Here, nonsensical things occurs repeatedly, for example, things in the house change the location without the knowledge of the owner, lost things, the thing lost days ago comes out from the other place, broken locks, clothes are sewn, volume of the cosmetics decrease too fast or too slow, the room is wet, dust scattered all over the room, a newspaper is rolled up into shape of genitals and left in the room, food in the refrigerator is eaten, etc. Victims of this harassment cannot leave their house, since every time they leave the house they recognize some alterations. It continues even after they make a contract with a security company, so most of them cancel the contract. It

## **Covert Harassment and Overt Harassment in Japan**

seems that such obstinate trespassing is aiming to inflict psychological damage on the victims by letting them know that somebody was in the house.

### **7. Harassment on Vehicles (Car, Bike and Motorcycle)**

There are reports of deflated tires, punctured tires, a sudden total failure of the car, a claim that somebody drew a hand that shows V-sign over the speed meter, as well as a fake accident.

### **8. Undelivered mails**

Many victims send letters that reports the harassment and asking for help, but are very skeptical if those mails are truly delivered. About 20 % of the victims reported about undelivered mails and parcels via post office and home delivery services. We found that the all three letters, registered mail, express mail and regular mail, we sent to Mr. Soichiro Okuno, the member of the House of Representative in April, May and June, were not delivered. We asked his secretary to write a letter and sent it to the president of Japan Post Network Company with the certificate of content. We received a report of delivery in writing, but those three letters are still missing. Knowing what happened to our activity, there is no wonder that the members become more anxious.

### **9. Suspicious Treatment Experienced During Shopping**

This is a type of harassment that the victim is treated impolitely at the register of a super market or home center, the service counter of the bank, post office or public office, a dining room, a restaurant, hair salon and others even though they are customers. The victim demands explanation when it happens, but they arrange people to observe it so that they can put the one assigned to do the job under the pressure that if he/she did not follow the direction, the person, too, would suffer violent harassment later.

### **10. Implication or Suspicious Attitude from TV Caster or Radio Personality**

Some report that TV caster or radio personality implies something related to the victim's privacy, use what the victim said or did at home in the TV program or peek them from the TV. In the digital broadcasting era, we need to be concerned about the fact that a special program is transmitted to

## Covert Harassment and Overt Harassment in Japan

the victim only. We are hoping that the perusal system will be established at the National Diet Library, so that all TV/ radio programs broadcasted nationwide are recorded and be able to review anytime when any suspicion occurs.

### 11. Implications at Work

There are an increasing number of victims who report implications of their privacy, which only the victim should know, by their coworker. Many people did not have a choice but resign their jobs due to the combination of the implication and harassment. However, there is a case that one of our members who won the trial at the court of final appeal using the recording on his IC recorder as the evidence. The case is a good reference.

### 12. Tapping and Secret Photographing

In order to coordinate these harassments that I have just explained, the offender must be able to read the victim's activities. Therefore, overwhelming number of victims suspect tapping and secret photographing. We hire private detectives to investigate this matter, but they were unsuccessful. Thus, we begin to realize that considerably sophisticated monitoring technologies are used.

In addition to the explanation about overt harassments, I want to mention the fact that the victims are experiencing multiple harassments continuously. There is no doubt that these harassments are organized crimes since they are impossible to execute individually. I believe that observing overt harassment from its characteristics would help us better understand the real nature of the crime. So, I would like to explain the characteristics now.

**We have found 11 characteristics of overt harassments from our survey.**

1. Group Activity: This is a characteristic of harassing a certain individual as a group. This characteristic alone can indicate that overt harassment is an organized crime. Even though it is a senseless action, when you file a suit, you end up being asked, 'Why so many people have to harass you?', 'Are you a very special person?', 'Who is paying the cost of use so many people? and 'Isn't it your paranoia?' in reality.

## **Covert Harassment and Overt Harassment in Japan**

2. **Stalking:** This is a characteristic that constantly follows a certain individual quietly. Not only while the victim is out, but also follows around even he/she is in the house and make a trouble with a superb timing. It is unbelievable in common-sense terms.
3. **Continuous and Repetitive:** The harassment lasts persistently 24 hours and 365 days a year.
4. **Calculated Timing:** The harassment often occurs at a superb timing. For example, the phone rings when you are just about to do something, electrical devices near you make a strange noise every time you move around the house, you hear foot steps from the floor above as you walk on the lower floor, and every time you go to the bathroom you hear somebody go to the bathroom next door. If it ends after a couple of times, it does not feel strange, but it is continuous and quite abnormal.
5. **Monitoring:** Harassing action with such a great timing cannot be done without monitoring the victim. Therefore, the victim have no choice but believe that somebody is monitoring him/her and hires a private investigator for tapping or secret photographing. Because they cannot find any evidence, we started to believe that considerably sophisticated tapping/secret photographing technology is in use.
6. **Systematic:** The superb timing of the harassment, which is not so unimportant like somebody peeps in the victim's life and makes nuisance action, made us start believing that the offender reads victim's behavior ahead of time and the type of the harassment is programmed in the system to automatically implement the operation. Harassments toward individuals have been highly developed.
7. **Organized:** Many victims move from place to place in order to escape from the harassment, but it is clear from the testimonies from those victims that harassment continues at the new location. Some moved from Kanto to Hokkaido, Hokkaido to Okinawa, Kanto to Tohoku or Kanto to Kansai, but the situation remained. Also, the victims live all over Japan. Consequently, it is obvious that overt harassments are operated by the crime groups organized nationwide.

## **Covert Harassment and Overt Harassment in Japan**

8. Networking: The organizations that spread nationwide make their communication network dense and harass victims no matter where they try to escape. Therefore, good communication network is essential for them.
9. Manualized: Since there are victims of similar harassment globally, we think that manuals exist and the offenders are operating based on the manuals.
10. Historical: We have learned from the survey that we have a history of overt harassments that is over 40 years.
11. Preposterousness: The 10 characteristics listed above are all extremely preposterous, and this preposterousness can bind all these characteristics.

The 11th characteristic of preposterousness is especially important. If the harassment is within the bounds of common sense, there would always be somebody who helps the victim. The family member can listen to the victim's story and friends can help, too. Police, lawyers, executive officers and politicians would listen to you and do something about it. However, the more preposterous the harassment is, the less people will listen to you. The main body of the crime is well aware of the fact, and we started understanding their strong intention to never do a kind of harassment within the bounds of common sense and focus on being senseless. It is extremely important that we clarify such intention of the main body of harassment.

On the other hand, victims become isolated because nobody listens to their complaints about such preposterous harassment. They are cornered and what is left for them is to commit suicide, be taken into the mental hospital or take self-defense measures. It has become to our knowledge that such ending is the picture the main body of the crime has drawn. The achievement of the NPO's activities is the clear understanding of the crime organization's strong intention and the picture they have drawn. Also, it is related to covert harassment.

### **Covert Harassment**

Next, I would like to explain covert harassment. We believe that invisible electromagnetic waves and ultrasounds are used as medium. Covert harassment is a crime that uses such medium to attack and control its target's

## Covert Harassment and Overt Harassment in Japan

mind and body accurately from a distance. Like overt harassment, the NPO stated the following 40 items on the questionnaire survey and ask the member to circle the ones they are experiencing or have experienced.

Hear a voice, hear a noise, see images, my thoughts are read by somebody, intervention to the consciousness, suppression and activation of the brain activity, unnatural dreams, anxiety of mind being violated, overeating, a poor diet, sexual excitement, loss of vitality, insomnia, sleep disturbance, strong sleepiness, mania, depression, amplified fear or anxiety, elevated suspicion, uncontrollable impulse, amplified hatred, nervousness, diffident, zooming eyes, loss of eye sight, loss of hearing, hear a voice from a distance, loss of sense of smell, sense strange smell, loss of taste, strange feeling left in the mouth after eating, feel of touch on the genitals, feel of insertion in the anal, tightening or numb feeling on the head, headache, feel like the head is wrapped with something soft, feels like something is implanted in the head, extreme fatigue, feel like an electricity ran through the body, constipation, diarrhea, incontinence of urine and feces, slackness of anus, manipulation of excretory function such as poor excretion, the muscle moves against his/her will, listless feeling, strong body odor, gas, excessive perspiration, sudden fluctuation of pulse, unusual (food poisoning, drunkenness, motion sickness, colic symptoms-(coughs, sneezing, nasal inflammation etc.), a burn, vibration of the surroundings, vibration of the body, sleep paralysis, sensation of body tic (splattering), pain in organs such as a heart, pain in genitals, pain of something piercing through the body, sensation of burn on the back of eyeballs, bizarre air, pain of impact from air bullets, fainting

**As a result, I could make the following table. This, too, has so many items that I would like to explain by dividing them into 11 categories.**

1. Harassment of Voice and Image Transmission: This is a typical covert harassment since 58% of the responders complained voice transmission and 65% complained about the noise transmission. Image transmission is 32%, less than voice and noise transmission, but can be considered as an abuse of same information transmission technology. Therefore, I am explaining about them together. As you have already known well, it is a harassment that makes you hear a sound in your head or hear a voice in the space even though there is nobody around you. The contents of the

## Covert Harassment and Overt Harassment in Japan

voice varies, for example, name calling, such as “Fool” and “Ugly”, order or threat, such as “Cut your wrist”, “Jump and fall”, “Kill yourself”, “If you do not do what I say, I will hurt your family” and “Go to a certain place”, words that sound like the person is peeking what you are doing in the bathroom, an annotation for what you are doing, the voice reads the book that you are reading, answer to the thoughts in your head and interactive communication with the voice.

Harassments by sound are the sound of piano in the midnight, sound of drum, shattering sound, sound of slamming the door, high pitch noise, low pitch noise, etc.

Majority of victims who report harassment of voice testify that they hear the voice all the time as long as they are awake. Also, many of them confessed that they were manipulated by the voice in the beginning. There is a possibility that the victim will take a huge risk by following the orders from the voice; for example, the victim is ordered to go the broadcasting station and do so, ordered to cut his/her wrist and do so or ordered to jump and fall and do so. So, this is a terrifying harassment.

2. Manipulation of three desires: The result of questionnaire survey shows that the most common covert harassment is sleep disturbance. About 69% of the members report this harassment saying that a voice wakes them up, cannot sleep because of the pain, some kind of awakening technology is being used. We can assume that manipulation of desire to sleep is implemented. There were a few people who could not sleep at all for almost a month and had to be admitted to the hospital. Sleep disturbance is one of the methods used to torture people; therefore, this is considered as a torture. As for the manipulation of sexual desire, Mr. Barrie Trower, whom you already know very well, testified that electronic wave of 6.6Hz can induce violent sexual drive, so I would like to leave it to that.
3. Manipulation of Physiology: It is evident that they can freely manipulate physiology, such as incontinence, gas generation, diarrhea, hardness and softness of feces, body odor. Since I experienced stalking, which made me feel a slight need of using bathroom day and night, I believe that it has a stalking characteristic, in other words, it works not only at a certain place but wherever you go. The stalking nature is so

## Covert Harassment and Overt Harassment in Japan

strong that it does not leave alone and make you believe that it is your natural self.

4. **Manipulation of Body and Motor Function:** This is a harassment, which your body movement is controlled against your will. People notice it when your neck and limbs are moved against your will, so it is very troublesome. It sometimes controls all muscles related to excretion freely, and shows its amazing manipulative ability. We believe that it can easily control you to feel like your athletic ability improved all of the sudden or not to let you have positive results no matter how much you practice. We think that this technology is being used for professional sports considerably. It may play a role in directing a pre-arranged game, too. We believe that it is more effective than using drugs, so that it has possibly become the technology necessary for winning medals in Olympics. In this era, we believe that it is necessary to run a test for this technology in addition to doping tests.
5. **Manipulation of Five Senses (Sight, Hearing, Taste, Smell, Touch):** The harassment causes, zooming eyes, an intentional ear trouble caused by the fluctuation of air pressure, a strange feeling left in the mouth after eating, strange smell without the source in the area, feeling of insects crawling on the skin, feeling of touch, etc. The victims of strange smell often report that the smell comes from their neighbors and seals their house very well; though, the smell keeps coming. Somebody used an expression that chunks of the smell are coming down from the ceiling. One of the victims was suffering from the smell of spray and went to mountains on the motorcycle only to find that the smell did not disappear. This is a stalking act with a smell of spray. We can imagine that manipulation of five senses can have a stalking characteristic.
6. **Manipulation of Emotions:** There is harassment that makes you tear up when you are not sad or make you laugh uncontrollably when it is not funny. In this person's case, he bursts into laughs when he is at the regular meeting and is worried that people may think he is suspicious.

The other person was manipulated to laugh whenever he feels that both cheeks have started inflating. Since it is done repeatedly, it is extremely troublesome. This alone can keep you from going outside. We also believe that happy feeling and depressed feeling can be manipulated

## Covert Harassment and Overt Harassment in Japan

freely. They often use this to induce dark feeling on the target as they do other harassment to increase the damage markedly.

7. False Sickness: (Sickness Manipulation): This is a harassment that induces sickness symptoms even though you are not sick. We believe that it can freely manipulate sneezing, runny nose, slight fever, blood pressure and pulse,. According to Mr. Barrie Trower, it can also induce mental sickness, heart attack and cancer, and he further testifies that, as for cancer, even the speed of progress can be controlled, and it agrees with the NPO's survey results.
8. Mind Control: It is very important that many of the victims from voice transmission harassment testify that the voice responds to their thoughts or the voice communicates interactively. This harassment cannot be realized without the technology that connects human brain and computer. The victims of this harassment naturally believe that somebody is reading their thoughts and start insisting that their minds are eavesdropped. Mind eavesdropping is an ultimate invasion of privacy. Moreover, it is very frightening that something can get into your mind, because it indicates the possibility of being controlled by the idea from outside instead of your own. What I explained so far are all technologies that make you lose who you are, but it is such a grave fact that it can work on your mind, too. It is an ultimate form of privacy invasion and a technique that completely denies democratic living.
9. Physical Attack: This harassment can be rephrased as harassment by torturing technology. Sensation of needle stabs, sudden attacks to organs, attacks by small or large air bullets, sensation of electricity creeping up the body, sensation of burning behind the eye balls, sensation of virtual torture in which both cheeks are pierced with a wire, etc. are reported.
10. Others: Vibration on the body and vibration of the surroundings. One of the victims of this harassment was attacked to the degree that his house was cracked. Sleep paralysis and sensation of insertion into genitals or anus, which seem nothing but abnormal. Sometimes, it makes the victim feel as if his/her heart is grabbed and massaged directly and make us wonder if it can be explained as a work of some technology.

## Covert Harassment and Overt Harassment in Japan

11. Murder: Dead people cannot testify, but 17 out of 1166 confirmed victims are already dead, so there is no doubt that it can kill people. Two people out of the 17 broke down by subarachnoid hemorrhage and one of them died directly from it. One died from heart attack. I believe it is not only the direct victim who dies but people around the victim are also targeted. I stood as a candidate four times to become a politician, won once of them and became the local assembly member, but the person who supported me and his family or those who probably voted for me died one after another. The causes of their deaths were a heart attack, cancer (some were scirrhous carcinoma), a sudden death while taking a bath, etc. These deaths were processed as deaths by natural cause, not by certain technology. We do firmly believe that there are many cases of murder, which the victim or the people around the victim do not realize it as a murder.

**Above is the outline of covert harassment. In order to implement such harassment, the following technology is necessary. We, the NPO, put this together based on the result of the questionnaire survey, so the following are inferences from the result.**

1. Stalking Technology: Since it is impossible to commit this crime without the stalking technology, which catches a particular individual and does not let go, we define this technology as the first basic technology used for covert harassment. It also requires the technology that can identify particular individuals, so we need to consider a microchip implant to be able to explain it. From my experience, I believe that stalking that relies on technology had already begun in early 70s. I also think we should consider their use of satellites. I think we can express it as biotelemetry technology employing satellites. You may have better way to address this technology. We use such expression, because we are just inferring based on the real situation from the standpoint of the victims.
2. Voice and Image Transmission Technology: We consider this as technology that bypass normal auditory organ or visual organ and directly transmit voice or image into the brain. Some of the victims of voice transmission harassment testified that he/she heard the same voice in overseas; therefore, this harassment can be implemented in a global scale, and we suspect the use of satellites here, too. As for image

## Covert Harassment and Overt Harassment in Japan

transmission, I do not know anything more elaborate than what I experienced. I think it only works in and around the big cities, such as Tokyo and Osaka. I experienced it in Paris and Firenze, too, so it seems to work in foreign big cities, too. However, it was 15 years ago when I experienced it, so it may be able to reach over farther distance than before. Anyway, it abuses the communication technology that allows transmitting voice and image directly to the brain without a terminal device.

3. **Mind Eavesdropping Technology:** Military is the one that is pursuing this technology the most. As for military, information collection technology is the most important technology, and the most crucial one is the technology to read the mind of military leaders. The crime cannot be implemented without technology that connects the human brain and computer. It is a brain-machine interface technology. It reads people's minds, so it has to contain a device that catches brain signals and transmit it. I cannot deny the existence of microchip that can be implanted in the brain.
4. **Technology that can influence human's physiological functions, three desires, five senses, emotion and mind activities:** Since human's physiological functions, three desires, five senses, emotion, motor activities and mind activity are mainly controlled by the brain, the brain-machine interface technology, which I mentioned earlier, is essential for this technology. In addition, the brain functions must be thoroughly understood to make this happen, so the level of control depends on the level of the neuroscience development, we think. It is also necessary that the microchip is as close to the brain as possible to catch feeble brain waves.
5. **Monitoring Technology:** They can attack their target wherever they run or even in the house, which means they utilize very sophisticated monitoring technology. Moreover, they must be able to program when and what kind of attack they do, because they attack with miraculous timing.
6. **Physical Attack Technology:** First, they need technology that can aim each body part precisely, and technology that allows you to choose what kind of pain and control the strength of the pain is necessary. This

## Covert Harassment and Overt Harassment in Japan

harassment requires these technologies, and we believe that the brain-machine interface is the center of them. This technology connects human brain and computer, so that experiments on human bodies are necessary to complete the development. I won't be surprised if there are many victims who are used for the development of this technology. Experimentation on humans is necessary to evaluate the product value, too. Furthermore, more experimentation on human is necessary to learn how to use the technology. As you can see, brain-machine interface technology requires experimentations on humans in many aspects. Therefore, there is no doubt that those departments which develop it, evaluate it, train with it, and control the technology are all committed to the crime in some ways. Therefore we need to investigate continuously where the technology is sold as a product, outflow situation of the program or whether similar product is brought from foreign country.

The NPO have been tackling covert and overt harassments in order to eradicate them. When we take a look at the scheme, to drive the victim into suicide, take them into mental hospital and corner them to take self-defense measures, which the main body of the crime pictures, we notice that it matches with three big social problems that we are facing in Japan now. Those are over 30, 000 and increasing number of suicides, increase of patients with mental disorder, which was once over 3 million patients and increase of unbelievably atrocious crimes.

According to the suicide overview material for 2012 issued by the National Police Agent, 8,278 people, 29% of the total of 28,396 people, committed suicide due to mental problem (Breakdown: depression 5,904 people, schizophrenia 1,150 people and other mental disorders 1,224 people). As you know, when one says he/she can hear voices or see images in the head, he/she is diagnosed as schizophrenic. Sleeplessness is categorized in other mental disorders. There is a report saying, currently, one out of ten people are suffering from insomnia in Japan. Harassment to cause sleeplessness is considered as torture, and is a very serious offense. Victims have to go to psychiatrists for consultation to deal with the problems that should be managed by the police primarily as covert harassments. Naturally, no victims can be satisfied by the way they are handled. We can imagine that there are many people who were misdiagnosed with a mental disorder and end up committing suicide. By implementing overt harassment on a victim one after another, they can cause a panic attack and take the victim to mental hospital. So, we believe many victims of covert and overt harassment are

## **Covert Harassment and Overt Harassment in Japan**

included in the 30,000 people who committed suicide. Also, almost 3 million people have mental disorders, now, in Japan; therefore, if we take suicide and mental disorder seriously, we need to take measures against both covert and overt harassments.

Nowadays, unbelievably atrocious crimes are happening often in Japan. We can suspect that the taxi driver murder case in Yokosuka on March 19, 2009, the personal injury case near Toyo-cho subway station of Tozai line on March 19, 2013 and the other personal injury case in Saitama-city in May 2013, were all executed by the victims of voice transmission harassment. It is necessary to tackle covert harassment to reduce atrocious crimes that we cannot even imagine.

Since the scheme that the main entity of the crime draws and the social conditions match, we can imagine that the entity is directing the social conditions, too. It is important that these social problems, an increase of suicides, an increase of patients of mental disorder and an increase of atrocious crimes, are a possibly directed by the entity. Those three problems are treated as big social issues now, and so as these covert and overt harassment should be. The NPO is fighting to obtain the recognition from the society and for the development of laws by which both of those crimes are punished as criminal offenses by appealing the very point.

We think that such a big issue does not receive enough attention because of the strong international connection between those entities of the crime. Therefore, the group of victims should construct international circles to fight against them face to face. We hope that today would be the opportunity to make that happen.

Today, I talked about the situation regarding covert and overt harassment in Japan. In the end, I would like to say thank you again to Mr. Juan E. Mendez from the bottom of my heart for giving us this opportunity.

Thank you very much.
